

Welcome to Year 3

In Science we have made origami boats to experiment if we could make them move using magnets. We found out that not all magnets attract to all materials. Did you know that wire attracts to magnets as does nickle? The special ingredients are cobalt, nickle, and iron. Foil does not react to magnets neither do wood, brick, paper and plastic.

Week:
20th -
25th January

In Art we have looked at paintings by JMW Turner. We had different types of paper which we used water colour to paint on. We used techniques like scrunching up the paper before we painted, adding salt to the wet paint and using cotton buds instead of paintbrushes. This was really fun and we got to see all the different effects.
