CUBED NUMBERS

In our maths we have been looking at cubed numbers and been working out problems like 3 cubed. These problems were tricky and that you had to concentrate.

Graphic Novels

We have been creating graphic novels. We made one for the parents who helped us when we go swimming (which was really fun for me). In our graphic novels we decided to include the whole journey which was arriving at QMC, getting on the bus and getting off the bus. We tried to put all our effort into these graphic novels.

RED NOSE DAY & BOOK FAIR

On Red nose day our school raises money, if you want, you can bring in some money to dress up and bring in a red nose. It was a lot of fun and worth bringing in a red nose and dressing up. We raised a lot of money for comic relief helping children.

Our school also held a book fair; raising money to get books to read in school. We learnt that we are lucky for having books. Never be ungrateful to have books as some people don't have books.

SCIENCE

In science this week we carried out an experiment. Our experiment was to see which helicopter would drop the fastest: the one with the bigger wings or the smaller wings? We had to draw out a plan. We were asked to draw out a table to record the results. Our results were that the bigger ones went slower and the smaller ones were faster because they presented less air resistance. We also tested air resistance by getting a small piece of A4 paper then we got A2 paper and we got A1 cardboard. We ran with them in front of us outside to see which one was the easiest to run with. The easiest one to run with was the A4 as it was the smallest. The hardest one to run with was the A1 cardboard, it had the biggest surface area, and made from cardboard, the A2 piece of paper wasn't too light, wasn't too hard, and was easier to run with than the A1.
